STARFIGHTER

TRS-80

by Sparky Starks

Until now, you may have never experienced it — the electric thrill of an involvement so intense that the passing hours collapse seemingly into moments, and what might have been perceived as mere entertainment before has now shaped itself into the tangible magic of incredible challenge.

You may have never experienced it. But you will — and the experience has a name — STARFIGHTER, the last word in arcade simulations.

To refer to STARFIGHTER as a game is to pigeonhole it along with other simulations and programs which only hint at the capabilities the microcomputer can provide the user on an entertainment level. STARFIGHTER brings a gloss and sophistication to your micro that will not diminish with time, for the challenge is nearly endless. STARFIGHTER marries the physical playability of an arcade machine with the intellectual — without the ability to make rapid, intelligent decisions, one may not experience the comforts of old age in the STARFIGHTER universe.

The STARFIGHTER player begins his tour of duty as a NEW PILOT. At this embryonic stage, he or she must prepare for the mission ahead — a mission which will consist of the identification and destruction of enemy craft. Perhaps in time (but only perhaps), the coveted rank of STAR LORD can be attained. But for now, one need only concern oneself with basic survival.

STARFIGHTER is a multiple skill level game with razor-sharp graphics and sounds that will return its cost a hundredfold in sheer enjoyment. The STARFIGHTER package includes two program tapes (separate Main Mission and New Pilot Simulator), or one self-booting disk, and an extremely detailed 32-page manual.

Adventure

AN OVERVIEW

By definition, an adventure is a dangerous or risky undertaking; a novel, exciting, or otherwise remarkable event or experience. On your personal computer, Adventure is that and more.

Playing any of the Adventure series consists of three elements: you, the user; the games themselves; and the author, Scott Adams of Orlando, Florida.

In beginning any Adventure, you will find yourself in a specific location: a forest, on board a small spaceship, outside a fun house, in the briefing room of a nuclear plant, in a desert, etc. The top portion of your video display will tell you where you are and what you can see; the bottom section of the display is devoted to inputting commands to your robot computer and receiving messages that may arise as the result of your orders. You have to get used to looking at both the top and bottom portions in order to find out what's going on in the game but it doesn't take long for the reading to become a reflex. In fact, you will have to live in those imaginary worlds.

By using two-word commands you move from location to location (called "rooms" although some rooms represent outdoor sites such as a swamp), manipulate objects that you find in the different rooms (pick them up, put them

down, carry them, etc.), and perform actions as if you were really there.

The object of a game is to amass treasure for points or accomplish some other goal such as preventing the destruction of the automated nuclear plant in Mission Impossible. Successfully completing a game, however, is far easier to state than achieve. In many cases you will find a treasure but be unable to take it until you are carrying the right combination of objects you find in the various locations.

If you're tired of video games of bouncing balls or shooting at targets; if you're ready for an intellectual challenge that transports you to new worlds of experience; if you want to see what a skilled programmer can do with a micro, invest in one of Scott Adams' games. An early Adventure (Adventureland or Pirate Adventure) is a good place to start because the more Adams creates, the tougher his puzzles get.

Z-CHESS III

TRS-80

by Bill Miller

In the beginning, there was chess — quite possibly the most popular board game the civilized world had ever known. Eventually, with the advent and popularization of the computer, chess was adopted — as well as adapted — for use on the microcomputer. And now, the game has reached its apex — as the incredible Z-CHESS III!

Z-CHESS III is one of the fastest, most versatile chess opponents available for your micro today. With its seven levels of "look ahead" and its ability to accept and play all standard chess moves (including castling and En Passant captures), it is truly a challenge for both beginning and advanced players. It can play either white or black, and its versatile board set-up mode allows specific positions to be played as desired. Naturally, Z-CHESS III will solve mate-in-two problems and it will solve them FAST! Look out Bobby Fischer!

THE MEAN CHECKERS MACHINE 2 (tm)

TRS-80

by Lance Micklus

Welcome to the world of checkers, a game that the entire family can play and enjoy. Your opponent is THE MEAN CHECKERS MACHINE 2(tm). Can you beat the computer? Sure — but only if you're careful!

At the beginning of the computer's turn, it begins searching throughout the checkerboard for every possible move. Once a legal move is found, the computer re-creates the move on an internal board, checking it against the playing board to see if the move looks promising. This "look ahead" function can continue up to 9 levels deep, depending upon the setting you choose.

Whether you're just starting out, or if you're already a checkers expert, you'll find that MEAN CHECKERS MACHINE 2(tm) will live up to its reputation as one of the greatest programs of its type anywhere!

Freeform input combined with choices suggested by the program makes the discovery of the more secret areas of the dungeon a real challenge!

STONE OF SISYPHUS

The STONE OF SISYPHUS carries you to a "thinking man's" dungeon, wherein you must apply your skills to effect survival and to realize your goals. This is an unfriendly subterranean world populated by hideous monsters, and dripping with fabulous treasures — the latter enticing you to face the former! Your survival hinges upon hard intellect, as opposed to the wispy uncertainty of chance, so be prepared to draw deeply from your intellectual reservoir! And — the responsiveness of the program to the individual qualities of your character make this grand adventure frustratingly enjoyable for hundreds of hours before all of its elusive secrets can be unlocked!

MORTON'S FORK

The third entry in the Maces & Magic series, MORTON'S FORK transports you into a world bereft of natural laws — a realm populated by magical beings and strange creatures. The scenario is set within the confines of an ancient wizard's fortress. Through your keyboard input, you equip your warrior with armor, weapons, and gold, as well as with desirable personal attributes. Only then will you be able to face the dangers of MORTON'S FORK! Features include multiple skill levels and a comprehensive manual describing the colorful Maces & Magic world.

MACES & MAGIC are fantasy adventures involving you and your computer. Armed only with your wits, a microcomputer, and the software provided, you can become the hero or the meal your destiny dictates. You create a character, equip him (or her) with suitable weapons and armor, and enter the dungeon in search of fame and fortune. Neither is particularly easy to obtain.

If you are successful in avoiding or conquering the various monsters, traps, enchantments and illusions set by our nefarious dungeonmasters, you may escape with riches and glory. Your name and deeds will be recorded for posterity in the records of the dungeon. More importantly, you'll be alive. You may then use the same character in his more experienced and wealthy form when you enter dungeons on later occasions.

In each dungeon there are random events which occur, but in the vast majority of cases the skill of the player in making correct choices determines the outcome of the game. The majority of instructions are furnished within the program in the form of appropriate prompts.

There are many ways to meet an untimely demise in the dungeon. Monsters and such are just one of the lines of defense between you and the treasures stored there. Various traps await the unwary (and the wary too). Some are lethal, while others are merely unpleasant or inconvenient. It pays to be suspicious. Beware of orcs bearing gifts.

The object of the whole exercise is not just to fight the monsters and collect treasure. You have to get out alive to enjoy it. In every dungeon there is at least one exit. It is possible to escape from each and every dungeon with a whole skin. We state that fact here because players often believe this not to be true. We really aren't out to get you. Not really.

Once you successfully exit from the dungeon, you will have an opportunity to save your character for further adventures in this and other dungeons. Your treasures will be converted to their gold equivalent and your weapons and armor stored in bat guano. When you start another adventure, you may call up your experienced character for another trip. The only limitation is that once a character is killed, he may reincarnated three times; after that, he is gone forever. No second chances, no tears, no breast beating. Gone. Kaput. Finished. You will have the distinction of adding to the dungeon statistics, however. A sort of secondhand immortality in recognition of a nice try. No glory or cash though. CHARGE!!

KID VENTURES are computer adventures into a child's world of make-believe. They are based on fairy tales and children's stories and are made so that your child may interact with the story. In the TRS-80 versions, cardboard cutouts with pictures mask all keys except the second row and the space bar. This helps little fingers to find the right keys and allows use by readers and non-readers alike. (On APPLE versions, the game paddle is used instead.) In addition to musical sound effects, the story mode also includes a special play-along cassette tape which will provide story narrative. During the story, your child will have the opportunity to answer simple questions. If the answers are correct, the story will proceed; if incorrect, he or she will be given another chance or may learn the correct answer by pressing the space bar. You will be surprised at how much your child will learn, and your child can color the cardboard cutouts that are included with all versions.

KID VENTURE #1 - LITTLE RED RIDING HOOD

KID VENTURE #1 introduces you to Riding Hood, Grandma, and of course, the Big Bad Wolf. Includes a play-along voice tape and cardboard cutouts of characters that your little one can color, plus a quiz mode so your child can learn while having fun.

KID VENTURE #2 - TWAS THE NIGHT BEFORE CHRISTMAS

This delightful program features the classic Yuletide poem, graphically illustrated (and with accompanying voice tape) that your child will want to see and hear again and again. In lieu of a quiz mode, the memory game **MATCH MAKER** is included — fun for readers and non-readers alike.

KID VENTURE #3 - OLD McDONALD'S FARM

OLD McDONALD'S FARM is the latest entry in the **KID VENTURE** Series. It is a sing-along venture based on the popular age-old nursery rhyme. Written in a new format, this **KID VENTURE** does not require a separate voice tape.

THE INTERACTIVE FICTION™ SERIES

by Robert LaFore — APPLE Conversion by Marin Computer Center

ABOUT THE SERIES

Amidst the glut and duplication of recreational software for the home computerist, there is now a novel new concept in microcomputer entertainment: The INTERACTIVE FICTION™ SERIES.

INTERACTIVE FICTION™ author/creator Robert LaFore has succeeded in eliminating the static structuring often found in entertainment programs in favor of a refreshing format which allows the player total involvement within inventive fictional situations.

As its name suggests, the ability to actually interact with characters and situations — to take part in the story — sets INTERACTIVE FICTION™ apart from the competition. The action begins when you react to a given situation or event, and then key in your response. You aren't limited to a couple of words; using full sentences is encouraged. You can enter the same situation time and again, and by using a different response, experience new twists of the adventure.

Explore the delightful world of INTERACTIVE FICTION™ — an engrossing and fascinating experience for all ages.

Interactive Fiction™ for the TRS-80 features the following full-length stories, plus "Encounter in the Park":

OTHER-VENTURE

Since their inception, Scott Adams' Adventures have been a mainstay in the libraries of computer owners. Now, the company that brought you these great programs brings you the fantasy/adventure games of other authors in this NEW series. Each program reflects many months and sometimes years of development by their respective authors.

Our standard Adventure series reflects Adventures written and executed using Scott's special machine-language interpreter. Our Other-Venture Series will contain adventures written using different methods, though still meeting the high standards set by Scott's original series!

We hope you have as much fun with this new series as with Scott's. (Be sure to look for new packages in both series in the future!)

CLASSIC ADVENTURE

OTHER VENTURE #1

By JOHN RAUSCH

TECHNOLOGICAL BREAKTHROUGH!!!

Since Will Crowther and Don Woods created it years ago, ADVENTURE has been programmed to run on nearly every computer known to man. The original Fortran version ran on a large PDP machine requiring nearly 300K of storage. At least three other versions of ADVENTURE exist for the APPLE. Some claim to be the only complete version; some claim to fill whole disks with program and data. To date, however, all require diskette access during the game to retrieve text for display on nearly every command. All added "features" of their own, changed some of the original text, or omitted something from the original.

In this version of ADVENTURE you get nothing but the real thing. All of the grandeur and mystery of the original Colossal Caves are re-created here — nothing has been added or left out! By using a text compression technique seldom used on microcomputers, the nearly 44K bytes of text fit in less than 25K. This means no disk access is needed during the game and that it can be played on 48K systems without disk drives. Both tape and disk versions are identical; only the media is different. The tape version includes instructions for making a disk copy. All Apple versions work with either DOS 3.2 or 3.3 and APPLE 2 or APPLE 2 Plus machines.

APPLE SPICE

ALL YOU NEED TO EXTEND
YOUR APPLESOFT BASIC

By Corey Kosak & David Fox

SOME OF APPLE SPICE'S FEATURES:

PRINT USING - gives your Apple the ability to print numeric values in a specified format. The syntax is similar to the PRINT USING command in other popular BASIC's. It supports commas, floating dollar signs, asterisk fill, and has an overflow indicator.

STRING SEARCH - allows your Apple to rapidly search through one string of characters for the occurrence of another string. It also supports searching a string for a list of words or phrases.

IF-THEN-ELSE - allows your Apple to execute one statement (or set of statements) if the "logical condition" (e.g., $A > B$) is TRUE and execute a different statement (or set of statements) if the condition is FALSE. You may use multiple lines and nest IF-THEN-ELSEs as deeply as you wish.

EXTENDED INPUT PACKAGE - makes entering data from the keyboard easier to control. Includes word warp (words which won't fit on the current line are moved to the next line down rather than being split in two), maximum string length control (will not accept characters past a length which you set), a control character filter (all control characters are ignored on input), and a selective character filter (allows you to specify up to 20 different characters which will be replaced by spaces during input).

SCREEN OUTPUT PACKAGE - You no longer need to spend time counting the characters in a PRINT statement to make sure a word doesn't break in the middle. In addition to automatic word wrap, this package allows you to set single, double or whatever spacing between lines, automatic "Press RETURN TO CONTINUE:" message when the screen fills (you set the maximum lines per screen), and automatic insertion of up to nine different variables in the text with an imbedded code. (Note: the Screen Output Package will not work on a printer.)

APPLE SPICE is a set of fast, assembly language routines that alleviate some of the drudgery of writing programs in Applesoft BASIC. APPLE SPICE allows you to concentrate more on your program logic and less on things like "prettifying" the screen and detecting keyboard entry errors. APPLE SPICE also greatly expands Applesoft's capabilities by adding features found in many larger BASICs such as PRINT USING, STRING SEARCH (INSTR), IF-THEN-ELSE, and LINE INPUT.

- Easy-Patch - Beginners with no machine language knowledge can use it.
- Excellent tutorial step-by-step manual. Written in easy-to-understand English.

APPLE SPICE is not copy-protected. You may include APPLE SPICE in your commercial programs without additional charge. Just mention that you used APPLE SPICE on your title screen and in your documentation.

APPLE SPICE comes with a clearly written hands-on manual (52 pages) that explains every feature in detail. All of the examples listed in the manual are included on the APPLE SPICE diskette, as well as some user-friendly programs that make it a snap to change APPLE SPICE's parameters and to relocate APPLE SPICE to where YOU want it in memory.

Over a dozen famous adventures are listed here (including one by Scott Adams), ready to be typed in. The secret techniques and methods of the masters are all here — plus, BASIC ADVENTURES includes a unique adventure generator program which will actually write another BASIC adventure program — not even the author will be able to predict the outcome! This 250-page tome will pay for itself many times over in the currency of sheer enjoyment. And who knows — you may soon be selling your own adventure!

COMPUTER SHADES

One of the problems inherent with prolonged viewing of a CRT is eyestrain. Harsh glare from a black and white monitor can begin to take its toll after just a couple of hours of steady viewing. Our green window will not only eliminate the glare and eyestrain, but will make your micro more attractive to "boot." No tools are necessary — attaches in seconds to your monitor using no-mess adhesive stripping and can be removed at any time. Great for utility and recreational programs alike!

BASIC ROUTINES FOR THE ATARI

by Jerry White

Basic Routines has been written especially for the Atari owner who wishes to write programs in Atari BASIC. This extensive manual is over 70 pages of pure Atari, and will supply the user with many short programs and routines (including several medium-sized ones) which you can follow and use in writing your own programs. Some of the routines are: "Paddle," which will show you how to incorporate a paddle or joystick into your own programs; "Soundemo," which demonstrates sound routines; "PMDEMO," which shows you how to use the all-important player missile strings, and many more. Basic Routines also includes a tape (or disk) of the programs in the book that will demonstrate the written routines.

Written by "Sunday Golf" author Jerry White, Basic Routines may very well be the best book of its kind on the market today. If your programming ability lies somewhere between beginning and advanced, then Basic Routines is for you.

C.R.I.S.

**Cash Register
Inventory System
By Scott Adams**

"We've used this system in our retail store for nine months now, and it's great"

— Pete Bender, Manager Adventure International Computer Store

Now, the computer age comes to your retail business via C.R.I.S. (Cash Register Inventory System) — a complete software package that will literally convert your ATARI 400 or 800 into a total point-of-sales terminal. With C.R.I.S., you can perform virtually any of functions found on standard register systems costing up to 10 times the price. But C.R.I.S. is also a complete inventory control system, too! Information on backorders, total items sold, items in stock, stock ordered, vendor numbers — it's all here and at your fingertips. C.R.I.S. also prints complete inventory reports, including purchase order, stock inventory, end of period, AND it will print customer sales receipts, just like the "Big Machines" do! Here's more:

- ★ Holds up to 1000 separate inventory items
- ★ Supports up to 10 salesmen
- ★ User-defined commission rate based on total sales and is individualized to each salesman
- ★ Accepts stock name of up to 20 characters in length
- ★ Up to 16 items can be listed on each invoice
- ★ End of Day, End of Period, and Purchase Order reports can be generated at any time
- ★ Easy error correction and recovery
- ★ Many "password-protected" functions to help prevent accidental data loss
- ★ Calculates totals on sales tickets and computes change
- ★ Comes complete in an attractive binder with user-friendly documentation
- ★ Requires only 1 disk drive

Completely menu-driven, C.R.I.S. doesn't require a degree in computer science to use; its easy-to-follow 42-page manual will lead the user step-by-step from initial power-up to final report generation.

If you manage a small business and have ever considered "going computer," now is the time to move up to the finest in point-of-sales and inventory management — now is the time to move up to C.R.I.S.

ATARI 400/800 32K DISK 052-0132 \$249.95

PLANETOIDS

TRS-80
APPLE

Apple Version by Marc Goodman **Apple version NOW Full Color!**
TRS-80 version by Greg Hassett
TRS-80 version currently being co-marketed by Adventure World under the name "FASTEROIDS."

Occasionally a game comes along which generates favorable public response to such an intense degree that it will actually develop cult status. PLANETOIDS is such a game!

It's your ship versus a swarm of killer planetoids and alien ships as you try to destroy them before they blow you into the next galaxy! PLANETOIDS gives you super-sharp graphics and sound effects (in the APPLE version), making this a sure bet for hours of unlimited fun.

The TRS-80 version is a dynamic heavyweight in its own right, including many extra features and playing modes. The "practice" mode will let you try out the game at some of the more difficult levels offered by being in a high score position. "Freeze" allows you to stop your game at any point to resume play later and "high speed" will increase the velocity of the passing planetoids. Add to all of this abort, "cruze," dogfight and score save (on cassette version only) options, and we think you'll agree that PLANETOIDS is arcade-style entertainment at its finest!

LUNAR LANDER

TRS-80
ATARI

by Mike Wall & Jack Moncrief

Joystick Compatible!

ATARI version by Jeff Jessee

In the TRS-80 version of the popular game, your micro will be taxed to its graphic limits! Written in fast machine language, the landscape scrolls horizontally by as you guide your LEM (Lunar Excursion Module) across the lunar surface. As you near your selected landing site, the automatic camera left behind by the previous mission "zooms in" for a tight close-up of your final descent! Each crash will cost you 1000 fuel units, but for the skilled player, relief can be found at the ravine's bottom with a refill at the fuel depot!

The ATARI joystick version features color graphics, and snappy 4-voice sound effects. Your mission is to make 5 successful landings with your LEM — if you've got what it takes to be a lunar pilot, you'll plant the U.S. flag to the rousing tune of "The Star Spangled Banner!" The ATARI version also includes multiple skill levels for the novice to the pro!

CONQUEST OF CHESTERWOODE

by Lun-Shin Yuen and Allan Armstrong

Several hundred moons ago, your ancestors migrated north through the dark Forest of Chesterwoode. During their trek, they met up with the dreaded basilisks, scores of worgs, a terrible worm, and many other dangerous creatures. The legends of the past have been lost, but tales were handed down through word of mouth for generations. In Chesterwoode, the voyagers began to think they would never leave that dark realm, and indeed, Chesterwoode is said by some to be eternal. Eventually, settling upon an area, the leaders of the wandering group surveyed a piece of land and divided it into 63 provinces. But as time passed, war swept through the provinces, and the remaining tyrants who had risen to power over the years, died out and were soon forgotten.

Each of the players in CONQUEST OF CHESTERWOODE is a descendant of one of the ancient tyrants. Your goal is to unite the provinces and modernize farming.

This is a war game similar to the strategy board variety, right down to the "hex" layout on your screen. CONQUEST OF CHESTERWOODE is a hybrid language, graphics-oriented game for 2 to 4 players. Disk version allows 1 player to challenge the computer. Truly a superior program, you will find CONQUEST OF CHESTERWOODE a unique and addictive playing experience.

COMMBAT

by Bob Schilling

TRS-80
ATARI
APPLE

Requires 2 Complete Computers

COMMBAT is a strategic and tactical battle game that will allow you (interacting through your computer) to pit your skill and dexterity against another player and their computer in a real-time battle to the death!

You and your opponent are located in a 4096-square-kilometer combat reservation with exactly the same resources available to each, the outcome to be governed only by the skills of the players. As soon as you have established serial communication with your enemy (110 to 9600 baud modem or direct connection), the battle begins! You decide which weapons to carry, then load them onto and maneuver up to eight remote controlled tanks with the primary goal of finding and destroying your enemy's base before he can do the same to you. Each enemy tank that you can defeat in combat lessens his chances of finding you.

Offensive and defensive weapons available to you include: rockets, lasers, shells, mines, decoys, drone reconnaissance aircraft and one nuclear ICBM. All but the last two items may be loaded onto, carried by and fired or dropped by your tanks, up to their maximum load-carrying capacity.

Your computer displays current resource status, a map of the combat reservation updated by tank, base and decoy sensors, and handles all communication chores, freeing you to make the strategic decisions and handle the tactical battle situations that arise.

COMMBAT requires two computer systems, each with a RS-232 port and a 300 baud full duplex modem. Different types of computers may be used; for example, a TRS-80 user may play an Atari user.

Galactic Empire. Galactic Trader. Galactic Revolution. Each an individual chapter in an expansive saga that spans the universe. Author/Creator Doug Carlston (Atari conversions by Dave Simmons) has weaved an intricate mise-en-scene that takes you across the galaxy and into contact with distant worlds and strange alien societies. The voyage begins with Galactic Empire which puts you in command of a fleet of starships and challenges you to conquer and hold the twenty inhabited worlds of the central galactic system. Next, Galactic Trader finds you removed from the lofty position of command you enjoyed in Empire, but provides the opportunity for you to buy your way back to the top through the avenues of galactic trade. Lastly, Galactic Revolution — the final conflict — lashes the series together as you try to unseat the evil Emperor from his position of power.

The Galactic Series can be played and enjoyed either as a whole or separately. Each chapter comes complete with instructions and Galactic scenario which outline in full detail the universe according to Carlston.

Experience the sweeping panorama of galactic conflicts and quests of epic proportions — experience the Galactic Series!

TREASURE QUEST

by Luke Buxton
Atari Conversion by Dan Horn

TRS-80
ATARI

If you've ever wanted to captain the trackless seas of the world in search of riches beyond measure with a band of treacherous dogs who happen to double as your crew, then this game should act as a most effective substitute.

As captain of the 18th century sailing ship *Zombie*, you have come half a world in your quest for treasure. Your journey has brought you to the nefarious Blood Straits, and perhaps to a rapid death as well! In your favor are accurate chartings of the area, a dependable navigator, and a seasoned crew. However, the Blood Straits is an area frequented by both violent storms and an unsympathetic British Navy, which may mistake you and your men for pirates. A fickle crew and a rapidly approaching hurricane season round out your problem roster!

In TREASURE QUEST you give a series of commands to your microcomputer as you go about searching for buried or sunken booty. A detailed instruction booklet is included to clarify and expound upon the various situations that you will encounter, along with advice and hints to aid you in your search. Each game begins differently, so you are assured of many hours of seafaring fun!

SEA DRAGON

by Wayne Westmoreland & Terry Gilman

TRS-80

Secure all hatches! Prepare to dive! The creative pros who brought you "The Eliminator" and "Armored Patrol" now do for submarines what "Armored Patrol" did for tanks! Sea Dragon is a slick, arcade-ish simulation that puts you in command of a nuclear sub that's armed to the hilt with deadly missiles and torpedoes. You guide your submarine past underwater mountains and through labyrinthine passages while avoiding a web of explosive mines that rise from the seafloor. Overhead, ships rain depth charges which must be avoided or destroyed. Maneuver around these dangerous obstacles and surface to refuel your ever-diminishing air supply — if you can!

You want variety? You got it! Sea Dragon boasts a scrolling seabottom that extends the equivalent of over two dozen screens laid end-to-end. And two-player option, sounds and high score save feature go hand in hand with the kind of graphics you've come to expect from Westmoreland & Gilman.

Not for the faint-hearted, Sea Dragon is your best bet for underwater thrills and chills. Action-plus from Adventure International!

MAXI CRAS

CHECK REGISTER ACCOUNTING SYSTEM

by Dale Kubler

Maxi CRAS (Check Register Accounting System) is a TRS-80 computerized check writing and recording system for personal or small business use. With Maxi CRAS, you can print a month's worth of checks in minutes (singly or on continuous forms), or you can write checks by hand and enter them into the register at your convenience. Maxi CRAS also eases the burden of reconciling your bank statement by providing the information you need to know quickly and efficiently. And Maxi CRAS **never** places a limit on your financial activity like some systems — **write as many checks per month as you need!**

But Maxi CRAS does much more than balance a checking account; it's an indispensable tool for managing money most effectively. You create up to 223 income and expense accounts in the system, and at any time, you can print a detailed statement that shows all activity in one or more of your accounts over a specified period of time. You always know exactly where your money is coming from and where it's going.

There's more! You can print complete check registers, income and expense sub-totals, and an account distribution statement that tells how each transaction was distributed over the individual accounts.

If you're weary of the messy, inefficient ledger method of bookkeeping; if you've been disappointed with other financial managing systems that don't deliver what they promise, then you're ready for best. We mean it when we say — **MAXI CRAS MEANS BUSINESS!**

by David Walonick

MAXI STAT is a revolutionary new program that was designed as a complete analysis package for the TRS-80. If you're familiar with SPSS (Statistical Package for the Social Sciences) and what it does for statistical analysis on mainframe computers, then you have an idea of what MAXI STAT can do on your microcomputer. The following description of MAXI STAT is divided into the 3 main components of statistical analysis:

(1) CODEBOOK

The codebook describes the data file format and the labels to be used for all statistical printouts. The four programs have been designed for complete codebook creation and editing. They are menu-driven and have incorporated several automatic error-checking routines.

(2) DATA ENTRY

MAXI STAT's data entry procedure is designed for speed and ease of entry. Entering and editing the raw information you wish to analyze is facilitated by the use of either fixed or free format. The four Data Management programs are menu-driven and are designed with a special backup feature that will save the data on disk at user-specified intervals.

(3) CONTROL FILES AND STATISTICAL ANALYSES

With MAXI STAT, you create the task control file to describe the types of analyses you would like printed. Hundreds of tasks can be specified with only one control file and analysis may be done on ranges of variables.

MAXI STAT is the most useful statistical analysis package on the market today. It was written and designed to allow maximum flexibility in designing your own analyses.

If you're in need of a program that adapts to your specifications, you need MAXI STAT.
